

MONO Organic Iced Tea: Natural, pure, responsible.

100% pure taste with no added sugar: MONO Organic Iced Tea is a healthy, completely organic refreshment beverage from the heart of Bavaria, Germany. We consciously avoid using any additives in form of preservatives, artificial flavors, or tea extracts within the brewing process of our teas. MONO Organic Iced Teas are made entirely from their natural ingredients and are solely produced in Germany and Austria. All ingredients we pick come from controlled organic cultivation. Our tea leaves, herbs, and fruits are freshly brewed and then filled into environmentally friendly packaging.

100% Organic

Vegan & low in calories
2 – 8 kcal/100 ml

Free from refined sugar, preservatives, and artificial flavors

Responsibly made in Germany & Austria

Sustainable

MONO Organic Iced Tea Your freshly brewed thirst quencher

Our production process is similar to that of a high-quality brewing process in a tea kitchen. Instead of using standard tea bags, the ingredients are filled into a huge 'tea pillow' which is then brewed in a large water silo at constant temperature. The resulting brew is filled directly into the packaging without any alterations. This method of tea production is rooted in artisanal craftsmanship and is quite different than regular industrial manufacturing. Thus, we create a high-quality tea beverage – incomparable to conventional iced teas. MONO Organic Iced Tea is a premium tea drink with an authentic flavor that is unsweetened or only very lightly sweetened. And again – we consciously avoid additives such as preservatives, artificial flavors, or tea extracts during production.

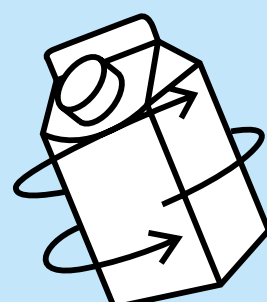

100% Bio.

Elopak® – the environmentally friendly packaging

Studies by the German Environment Agency (UBA) show: Compared to other types of packaging, beverage cartons perform the best in terms of climate change impact and CO2 footprint. Renewable materials, such as the use of the regenerating raw material wood, and low CO2 emissions during production, along with space-saving transport, ensure efficient, climate-friendly distribution.

Together with our partner Elopak, we have opted for the Pure-Pak® carton packaging with an FSC license. The non-profit organization FSC, Forest Stewardship Council™, is committed to ensuring sustainable forest management

100%
Recycleable

Why not glass? Elopak is the smarter solution!

ReThink – ReCycle

Environmental and climate protection are important concerns for us. That's why we put focus on recyclability regarding packaging. We want to contribute to the vision of a 100% circular economy. Currently, in Germany about 70% of used beverage cartons are recycled. The high quality of our carton packaging makes it a sought-after recycling product with valuable secondary raw materials that can be recycled up to seven times. The recovered materials are processed again and used, among other things, as packaging material or as additives for burning.
